

# Project Report Format

## 1. INTRODUCTION

*ToyCraft Tales: Tableau's Vision into Toy Manufacturer Data* is a data analytics project developed using Tableau to analyze and visualize toy manufacturer data. The project focuses on transforming raw and unstructured data into meaningful visual insights through interactive dashboards. It examines manufacturer distribution across US states, year-wise growth trends, index-based performance, and overall manufacturer statistics.

### 1.1 Project Overview

ToyCraft Tales is a data analytics project developed using Tableau to analyze toy manufacturer data. **The project focuses on identifying trends, state-wise distribution, index performance, and year-wise growth of toy manufacturers using interactive visual dashboards.**

### 1.2 Purpose

The purpose of this project is to transform raw toy manufacturer data into meaningful insights using data visualization techniques. It helps in understanding market trends, regional performance, and manufacturer growth patterns.

## 2. IDEATION PHASE

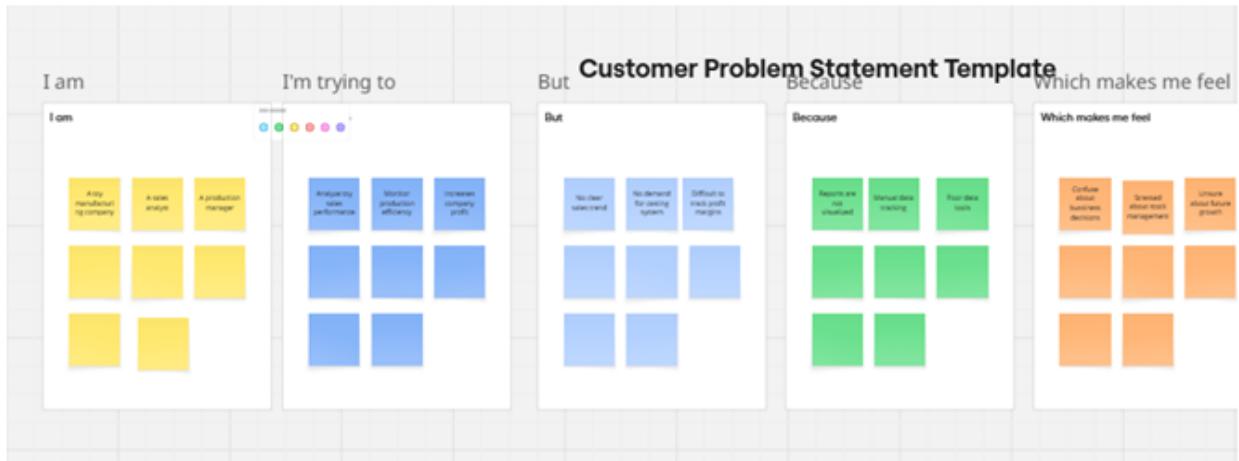

### 2.1 Problem Statement

#### **Customer Problem Statement Template:**

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

## Example:

## 2.2 Empathy Map Canvas

### Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

## Example:

The screenshot shows a digital empathy map canvas. At the top left is a purple sidebar with a heart icon and the word "Empathy". The main area has a large central head silhouette divided into four quadrants: "SENSE" (top-left), "THINK & FEEL" (top-right), "DO" (bottom-right), and "BE" (bottom-left). Each quadrant contains a cluster of colored sticky notes (yellow, green, blue, pink) with questions like "What do they SEE?", "What do they THINK and FEEL?", "What do they DO?", and "What do they BE?". To the left of the head is a sidebar titled "Empathy map canvas" with instructions: "Use this framework to empathize with a customer, user, or any person who is effected by a team's work. Document and discuss your observations and note your assumptions to gain more empathy for the people you serve." Below the sidebar is a note: "Originally created by Gavan Dayal". At the bottom left is a "Share template" button.

## 2.3 Brainstorming

### Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

### Step-1: Team Gathering, Collaboration and Select the Problem Statement

## Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

**10 minutes** to prepare  
**1 hour** to collaborate  
**2-8 people** recommended

**Before you collaborate**  
A little bit of preparation goes a long way with this session. Here's what you need to do to get going.  
**10 minutes**

**A Team gathering**  
Define who will participate in the session and send an invite. Share relevant information or pre-work ahead.

**B Set the goal**  
Think about the problem you'll be focusing on solving in the brainstorming session.

**C Learn how to use the facilitation tools**  
Use the Facilitation Superpowers to run a happy and productive session.  
[Open article](#)

**1 Define your problem statement**  
What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.  
**5 minutes**

**PROBLEM**  
How might we [your problem statement]?  

### Step-2: Brainstorm, Idea Listing and Grouping

**2 Brainstorm**  
Write down any ideas that come to mind that address your problem statement.  
**10 minutes**

**TIP**  
You can select a sticky note and hit the pencil icon to sketch it out to start drawing!

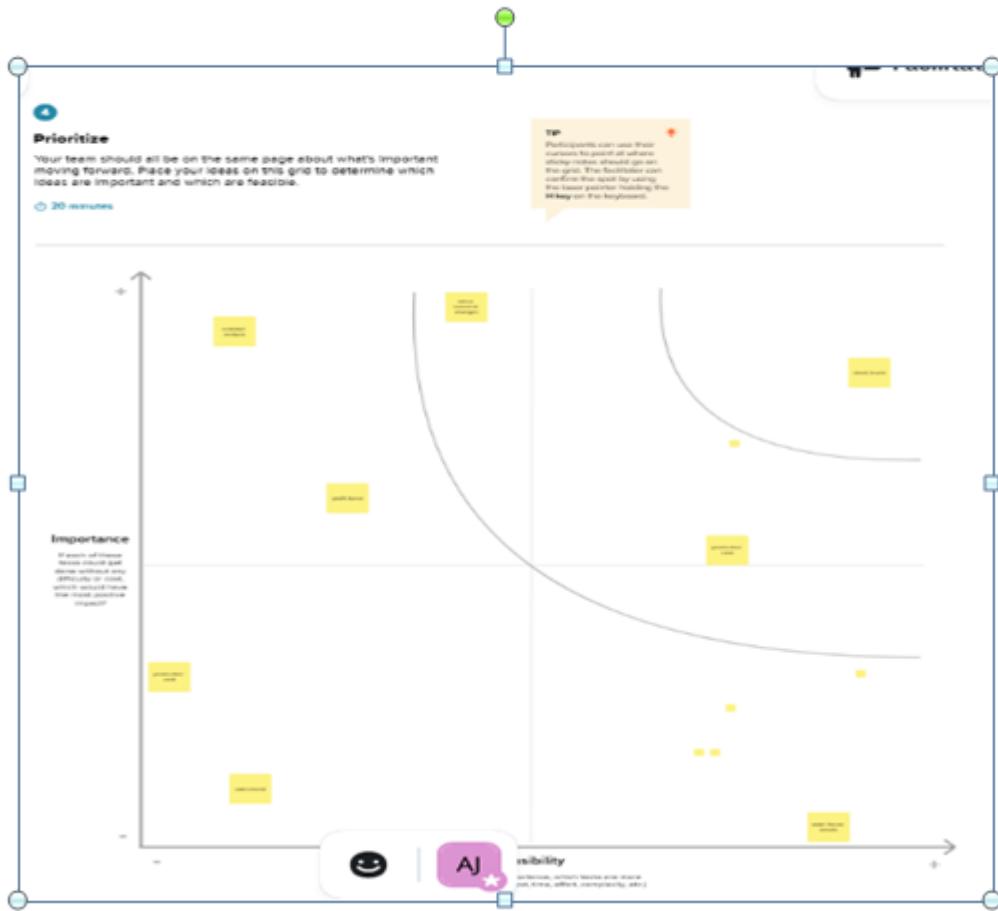

Person 1: Safety, Health, Safety, Health  
Person 2: Safety, Health, Safety, Health  
Person 3: Safety, Health, Safety, Health  
Person 4: Safety, Health, Safety, Health  
Person 5: Safety, Health, Safety, Health  
Person 6: Safety, Health, Safety, Health  
Person 7: Safety, Health, Safety, Health  
Person 8: Safety, Health, Safety, Health

**3 Group ideas**  
Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.  
**20 minutes**

**TIP**  
Add conversational logic to sticky notes to make them easier to find, remember, and categorize in context down the line within your mind.

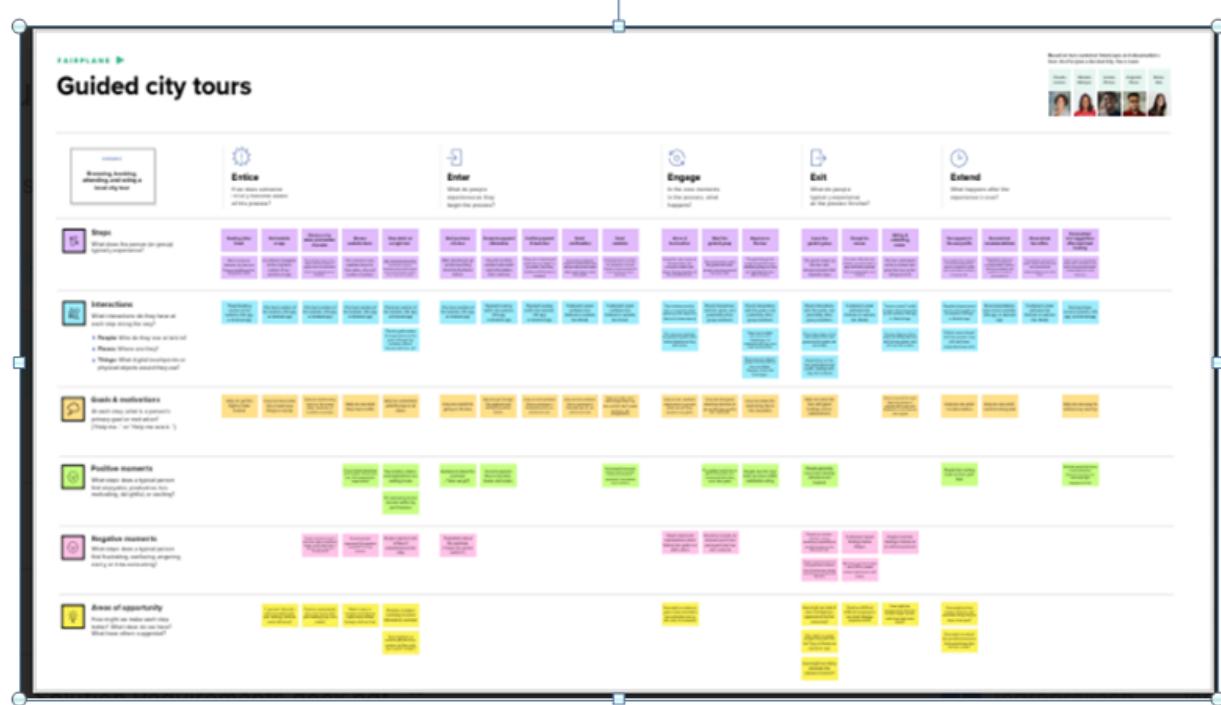

### Step-3: Idea Prioritization

## 3. REQUIREMENT ANALYSIS

### 3.1 Customer Journey map

# Customer Journey Map

## 3.2 Solution Requirement

### Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Sales Analysis	Category-wise sales analysis Region-wise sales comparison Monthly & Quarterly trend analysis
FR-4	Profit Analysis	Identify top profitable products Detect loss-making products Region-wise profit distribution

FR-5	Customer Insights	Identify best-selling toys Analyze customer buying patterns Segment analysis (age group / region if available)
FR-6	Reporting & Export	Generate summary reports Export dashboard as PDF/Image Share dashboard with stakeholders

#### **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	<b>Usability</b>	The Tableau dashboard should be user-friendly, with clear navigation, simple layout, and easy-to-understand visualizations for business users.
NFR-2	<b>Security</b>	Data should be securely stored and accessed only by authorized users. Role-based access control must be implemented to protect sensitive sales and profit data.
NFR-3	<b>Reliability</b>	The system should provide accurate and consistent analytical results without data loss or calculation errors.
NFR-4	<b>Performance</b>	Dashboard should load within 3–5 seconds even with large datasets and support smooth filtering and drill-down operations.
NFR-5	<b>Availability</b>	The dashboard should be available 24/7 for business monitoring with minimal downtime.
NFR-6	<b>Scalability</b>	The system should handle increasing data volume (future sales data) without affecting performance.

#### **3.2 Data Flow Diagram**

### Data Flow Diagrams:

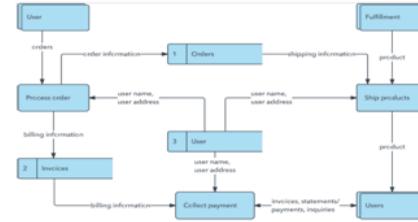

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

### Example: (Simplified)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
Business Manager	Dashboard Access	USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
Sales Analyst	Category Analysis	USN-3	As a user, I can register for the application through Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-2
Sales Analyst	Category Analysis	USN-4	As a user, I can register for the application through Gmail	I can view time-series charts showing growth patterns	Medium	Sprint-1
Inventory Manager	Login	USN-5	As a user, I can log into the application by entering email & password	I can identify low-stock and high-demand products	High	Sprint-1
Marketing Team	Dashboard	USN-6	As a marketing executive, I can analyze customer preferences and best-selling products	I can view top-selling products and customer segments	Medium	Sprint-2
Customer (Web user)	Profit Analysis	USN-7	As top management, I can analyze profit margins by product and region	I can view profit ratio and loss-making products	High	Sprint-1

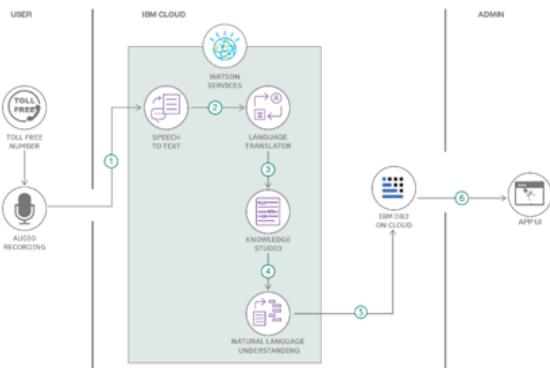

### 3.3 Technology Stack

### Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

#### Example: Order processing during pandemics for offline mode

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

**Table-1 : Components & Technologies:**

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.	HTML, CSS, JavaScript / Angular Js / React Js etc.
2.	Application Logic-1	Logic for a process in the application	Java / Python
3.	Application Logic-2	Logic for a process in the application	IBM Watson STT service
4.	Application Logic-3	Logic for a process in the application	IBM Watson Assistant
5.	Database	Data Type, Configurations etc.	MySQL, NoSQL, etc.
6.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8.	External API-1	Purpose of External API used in the application	IBM Weather API, etc.
9.	External API-2	Purpose of External API used in the application	API, etc.
10.	Machine Learning Model	Purpose of Machine Learning Model	Object Recognition Model, etc.
11.	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration:	Local,

**Table-2 : Application Characteristics:**

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	List the open-source frameworks used	Opensource framework

2.	Security Implementations	List all the security / access controls implemented, use of firewalls etc.	e.g. SHA-256, Encryptions, IAM Controls, OWASP etc.
3.	Scalable Architecture	Justify the scalability of architecture (3 – tier, Micro-services)	-
4.	Availability	Justify the availability of application (e.g. use of load balancers, distributed servers etc.)	-
5.	Performance	Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's etc.)	-

## 4. PROJECT DESIGN

### 4.1 Problem Solution Fit

#### Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

#### Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.**

#### Template:

### 4.2 Proposed Solution

#### Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Toy manufacturing companies struggle to analyze large volumes of sales and profit data effectively. Manual spreadsheets make it difficult to identify trends, top-performing products, regional performance, and seasonal demand, leading to delayed and less accurate business decisions.
2.	Idea / Solution description	Develop an interactive Tableau dashboard that integrates toy manufacturer sales data and provides KPI tracking (Revenue, Profit, Growth %), category-wise and region-wise analysis, trend visualization, and dynamic filtering to support real-time decision-making.
3.	Novelty / Uniqueness	The solution combines interactive visual analytics, drill-down capabilities, and real-time KPI monitoring in a single dashboard. It transforms complex raw data into easy-to-understand visual insights specifically tailored for toy manufacturing business analysis.
4.	Social Impact / Customer Satisfaction	Helps businesses optimize inventory, reduce losses, and improve product planning. Enhances customer satisfaction by ensuring better availability of popular toys and improved strategic decisions based on data insights.
5.	Business Model (Revenue Model)	Subscription-based dashboard access for businesses, consulting services for customized analytics solutions, and enterprise-level Tableau deployment for large toy manufacturing firms.
6.	Scalability of the Solution	The dashboard can handle increasing sales data over time and can be expanded to include new KPIs, additional regions, advanced forecasting models, and integration with ERP systems without affecting performance.

### 4.3 Solution Architecture

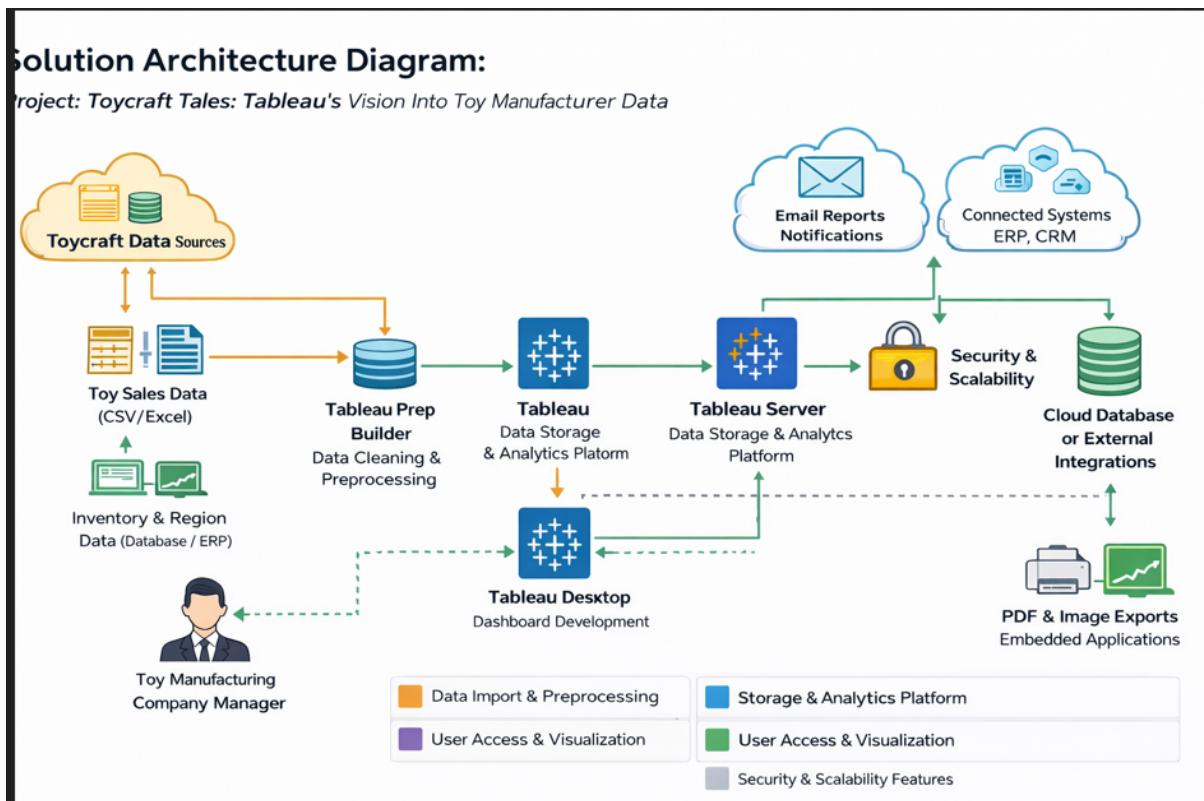

#### **Solution Architecture:**

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

### Example - Solution Architecture Diagram:

## 5. PROJECT PLANNING & SCHEDULING

### 5.1 Project Planning

#### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	2	High
Sprint-1	KPI Dashboard	USN-2	As a user, I will receive confirmation email once I have registered for the application	1	High
Sprint-2	Category Analysis	USN-3	As a user, I can register for the application through Facebook	2	Low
Sprint-1	Regional Analysis	USN-4	As a user, I can register for the application through Gmail	2	Medium
Sprint-1	Login	USN-5	As a user, I can log into the application by entering email & password	1	High
Sprint-2	Dashboard	USN-6	As management, I can identify top profitable and loss-making products	3	High
Sprint-3	Interactive Filters	USN-7	As a user, I can apply filters (Region, Category, Date) to customize reports	2	Medium
Sprint-3	Report Export & Deployment	USN-8	As an organization, we can export and deploy dashboard on Tableau Server/Public	3	High

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint R (Actual)
Sprint-1	20	8 days	16 Dec 2025	24 Dec 2025	20	23 Dec 2025
Sprint-2	20	8 days	24 Dec 2025	31 Dec 2025	18	01 Jan 2026
Sprint-3	20	8 days	02 Jan 2026	09 Jan 2026	20	09 Jan 2026
Sprint-4	20	8 Days	10 Jan 2026	17 Jan 2026	19	18 Jan 2026
Sprint-5	20	8 Days	19 Jan 2026	26 Jan 2026	20	26 Jan 2026
Sprint-6	20	8 Days	27 Jan 2026	09 Jan 2026	17	04 Feb 2026
Sprint-7	20	8 days	02 Feb 2026	12 Feb 2026	20	12 Feb 2026
Sprint-8	20	8 days	13 Feb 2026	20 Feb 2026	19	20 Feb 2026

## 6. FUNCTIONAL AND PERFORMANCE TESTING

### 6.1 Performance Testing

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values																																																										
1.	Data Rendered	<p>The data rendered shows the year-wise number of toy manufacturers from 2005 to 2015 using an Area Chart. The chart displays the trend and total manufacturer count for each year.</p> <table border="1"> <caption>Analysis on number of Manufacturers by year</caption> <thead> <tr> <th>Year</th> <th>Number of Manufacturers</th> </tr> </thead> <tbody> <tr><td>2005</td><td>1,623</td></tr> <tr><td>2006</td><td>1,576</td></tr> <tr><td>2007</td><td>1,555</td></tr> <tr><td>2008</td><td>1,424</td></tr> <tr><td>2009</td><td>1,334</td></tr> <tr><td>2010</td><td>1,196</td></tr> <tr><td>2011</td><td>1,188</td></tr> <tr><td>2012</td><td>1,126</td></tr> <tr><td>2013</td><td>1,090</td></tr> <tr><td>2014</td><td>1,120</td></tr> <tr><td>2015</td><td>1,144</td></tr> <tr><td>2016</td><td>1,114</td></tr> </tbody> </table>	Year	Number of Manufacturers	2005	1,623	2006	1,576	2007	1,555	2008	1,424	2009	1,334	2010	1,196	2011	1,188	2012	1,126	2013	1,090	2014	1,120	2015	1,144	2016	1,114

|  | <ul style="list-style-type: none"><li>• Year-wise Trend Analysis</li><li>• Index Distribution Analysis</li><li>• Overall Manufacturer Summary</li><li>• Geographic Distribution by Index</li></ul> |
|--|--|

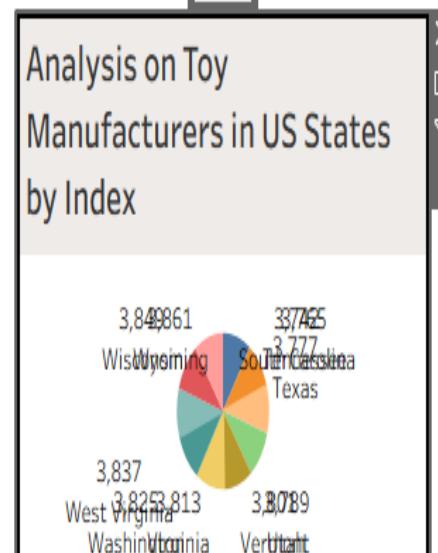

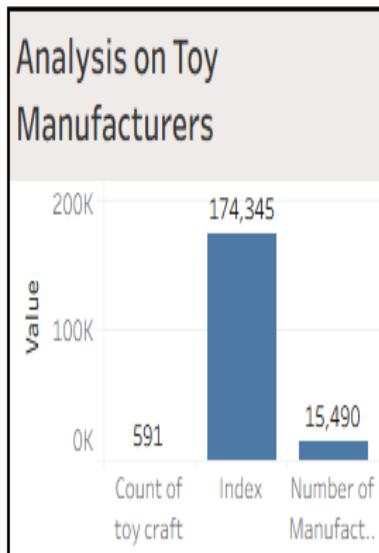

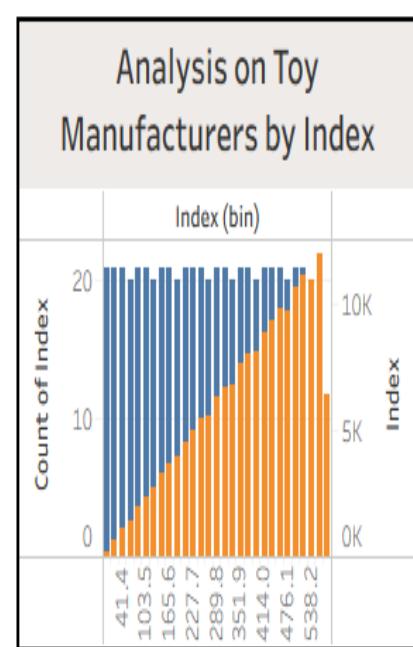

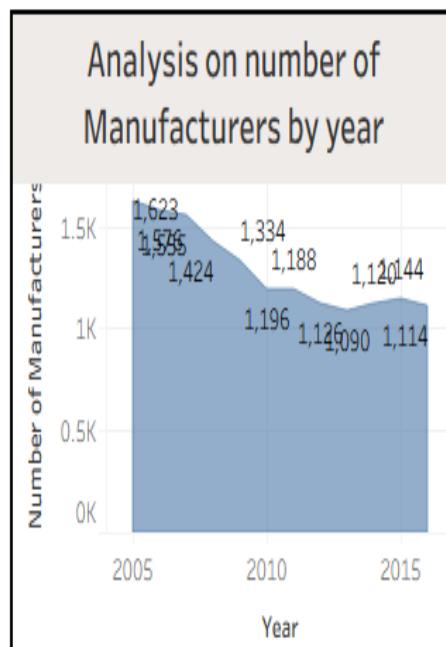

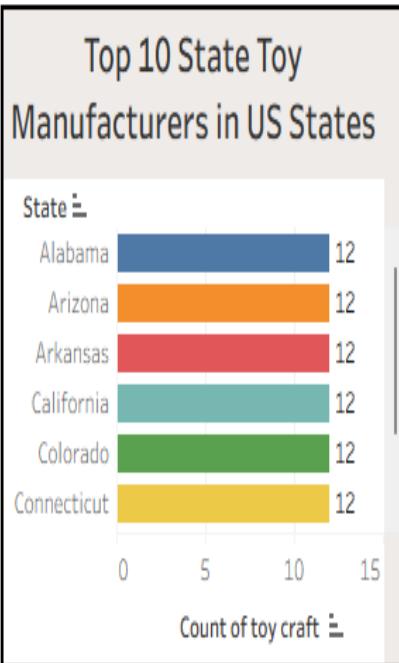

- Year-wise Trend Analysis
- Index Distribution Analysis
- Overall Manufacturer Summary
- Geographic Distribution by Index

## 7. RESULTS

### 7.1 Output Screenshots

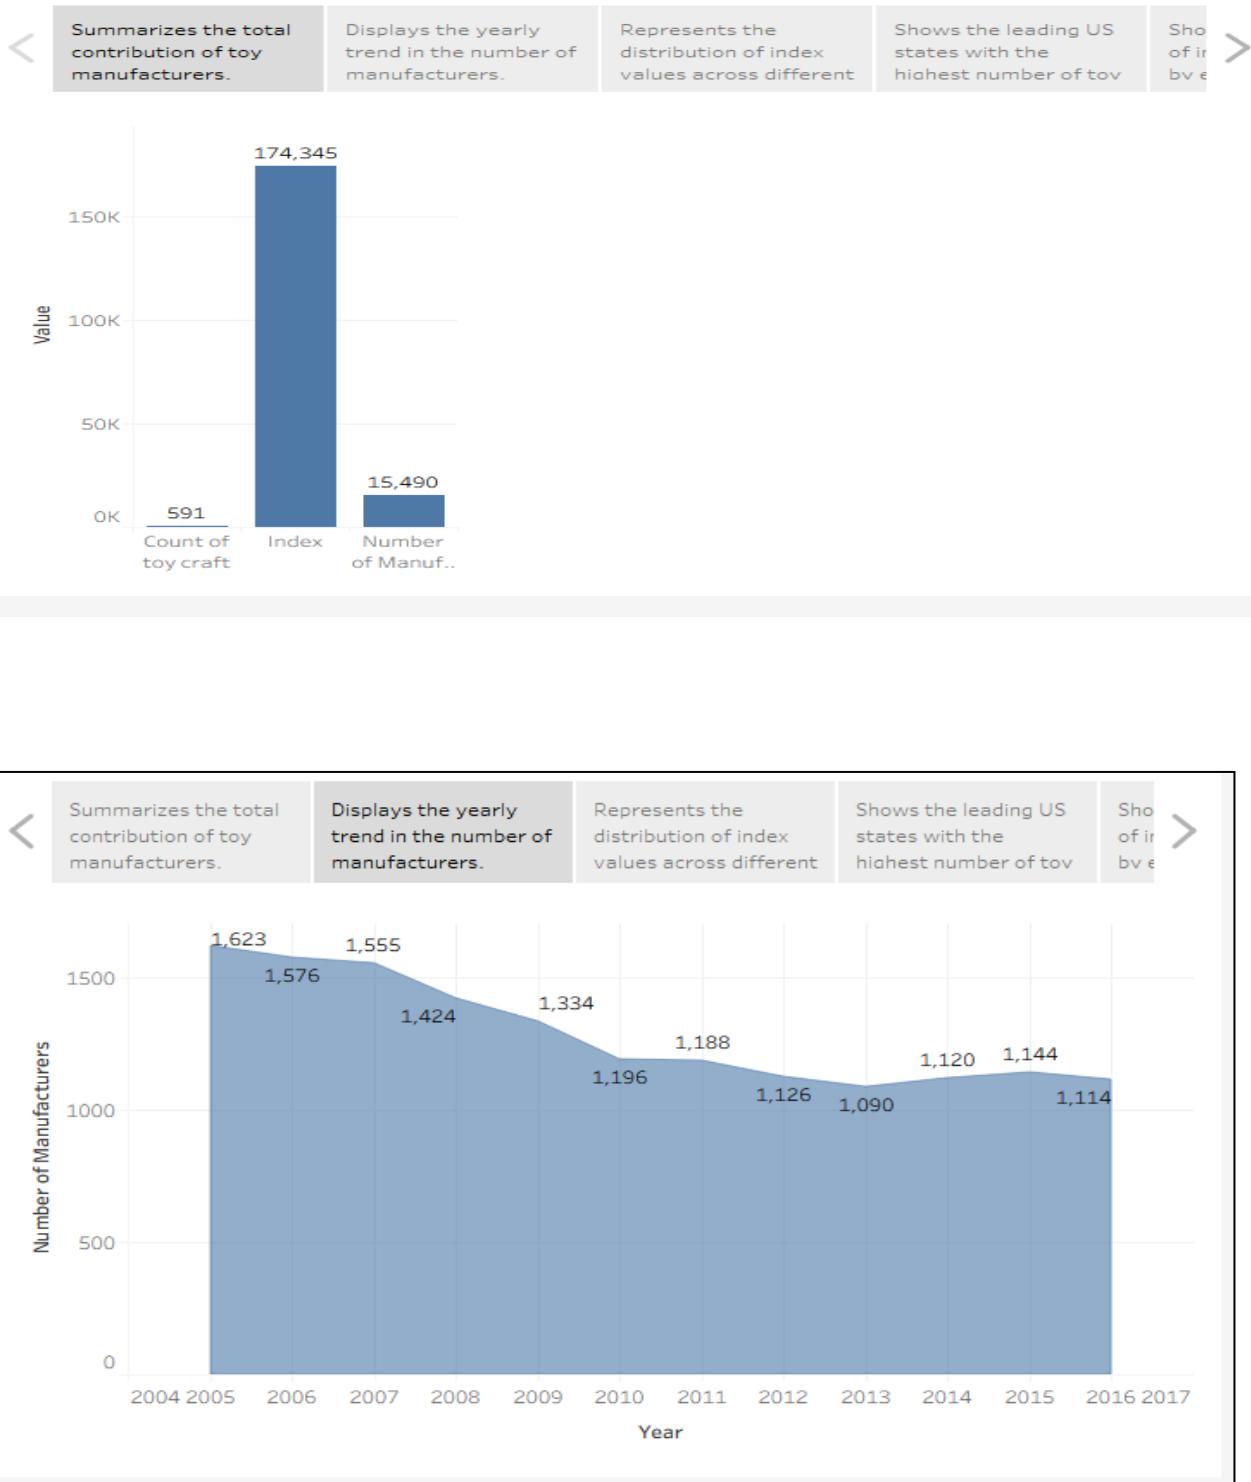

## DASHBOARD

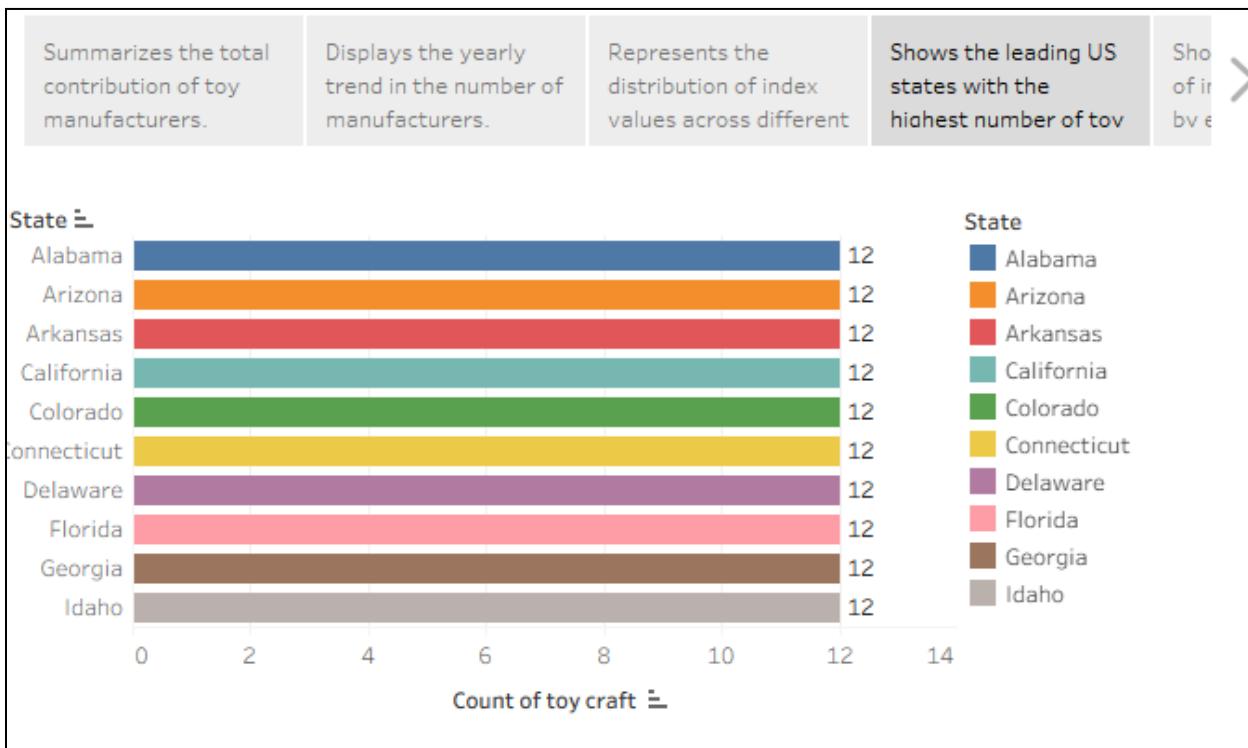

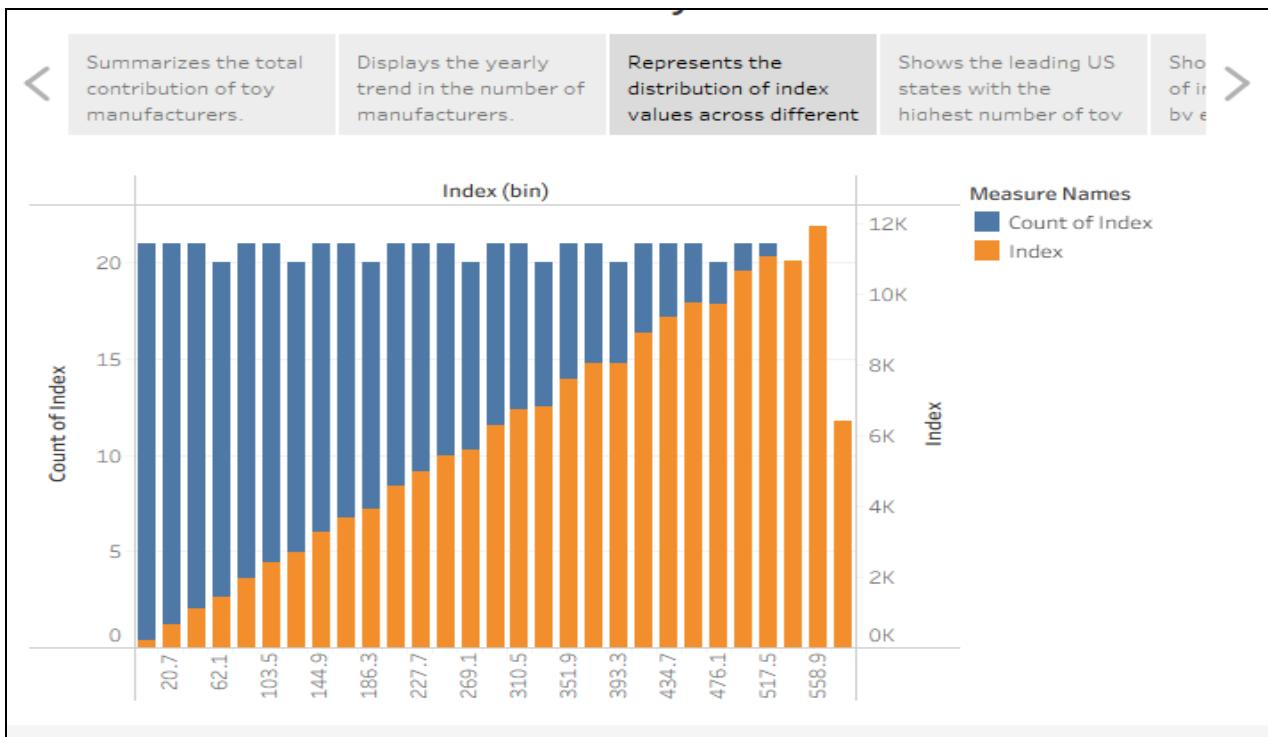

# ToyCraft Tales Tableau's Vision into Toy Manufacturer Data

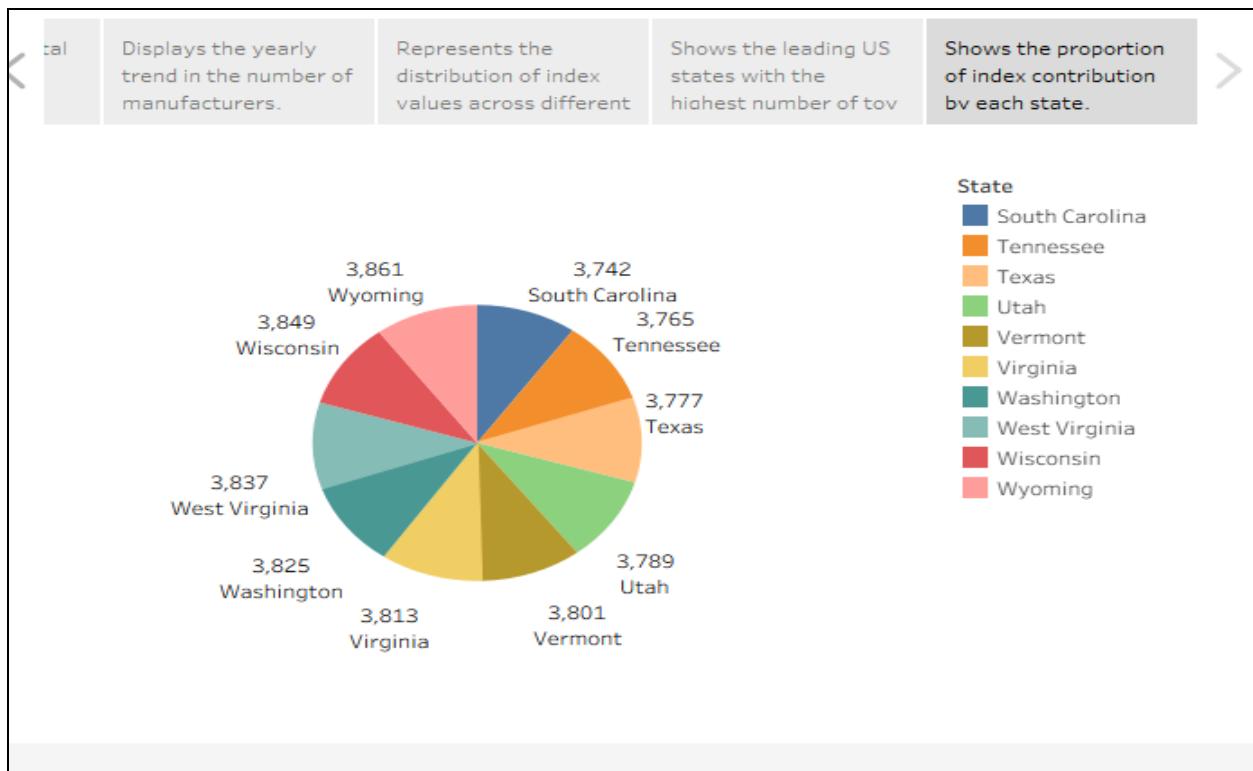

STORY

## ToyCraft Tales Tableau's Vision into Toy Manufacturer Data Story

## 8. ADVANTAGES & DISADVANTAGES

### Advantages

- Easy data interpretation
- Interactive filtering
- Visual comparison of trends
- Time-saving analysis

### Disadvantages

- Depends on dataset accuracy
- Limited predictive capability
- Requires Tableau software

## 9. CONCLUSION

The ToyCraft Tales project successfully demonstrates how Tableau transforms raw manufacturer data into interactive visual insights. The dashboard enables effective decision-making through structured and clear data visualization.

## 10. FUTURE SCOPE

- Add predictive analysis
- Integrate real-time data
- Include profit and revenue forecasting
- Expand to global toy manufacturer data

## 11. APPENDIX
